

ALTERNATE SITE TESTING (AST)

There are important limitations to Alternate Site Testing (AST).
Please consult your healthcare professional before performing AST.

What is AST?

Alternate Site Testing (AST) means you can use parts of your body other than your fingertips to check your blood glucose levels. Prodigy Meters allow you test your palm, forearm, upper arm, calf or thigh.

What is the Advantage?

Fingertips feel pain more readily because they are full of nerve endings. At our body site, nerve endings are not so numerous and you will not feel as much pain as you experience on the fingertips.
